

## 50 years of experience and innovation

**PLASTIL Solutions Plastiques** brings together, under a single brand, a group of small and medium-sized companies, either created or acquired by the Legeais family. The Plastil group is independent, family-run and led by Mr Christophe Legeais.

From the beginning, Plastil has built its commercial success thanks to its range of tambour door slats which are, among other applications, predominantly used in office furniture cabinets. The first patent was registered in 1968 with the launch of the Ariane range and the mythologically named references Ariane, Neptune and Vestale. Plastil then quickly became an established supplier to the major French brands: JEC, Marcadet, RFE, Roneo, Strafor, Vinco. Since then, over 100 different references and 5 industrial patents have been granted.

Simple in appearance, the hinged slat profile is actually a complex product which is constantly evolving. Plastil's shutter characteristics allow optimum operation in all manner of cabinets of all shapes and sizes. An extensive range of accessories, tracking, handles, centre stops and terminal slats allow a variety of finished options.

To allow us to keep up with market demands, we are able to offer assistance to our customers when it comes to project management and we also work on developing new materials alongside the best designers (such as Jean-Michel Wilmotte) to create imaginative solutions. We are also continually developing, in conjunction with our supply chain partners, so that our products remain sustainable and 100% recyclable.

Our shutters have a minimum guarantee of 10 years, although they often exceed a 20-year life span. We have a rigorous selection process for all components, which must meet the most demanding environmental standards (FCBA, NF, REACH, TÜV).
